Ferdinand Verhulst

A Toolbox of Averaging Theorems

Ordinary and Partial Differential Equations

Springer

Contents

1 Introduction 1
- 1.1 Perturbation Problems 1
- 1.2 Amplitude-Phase Transformation 4
- 1.3 Comoving Varables 6
- 1.4 Amplitude-Angle Transformation 8
- 1.5 Perturbed Linear Systems and Forcing 9
- 1.6 Order Functions and Timescales 11
- 1.7 On Contraction and Iteration Approximations 12
- 1.8 Comparison of Methods 14
- 1.9 Analytic and Numerical Approximations 17

2 First Order Periodic Averaging 19
- 2.1 The Basic Averaging Theorem 19
- 2.2 Quasi-Periodic Averaging 21
- 2.3 Applications 22
  - 2.3.1 A Linear Example with Forcing 22
  - 2.3.2 The Van der Pol-Equation 24
  - 2.3.3 Averaging Autonomous Equations 25
  - 2.3.4 A Generalised Van der Pol-Equation 26
  - 2.3.5 The Mathieu-Equation with Damping 27
  - 2.3.6 The Forced Duffing-Equation Without Damping 27
  - 2.3.7 Nonlinear Damping 28
  - 2.3.8 A Hamiltonian System with Cubic Term 29
  - 2.3.9 The Spring-Pendulum 32

3 Periodic Solutions 35
- 3.1 Periodic Solutions 35
- 3.2 Applications 36
  - 3.2.1 A First Order Equation 36
  - 3.2.2 A Generalised Van der Pol-Equation 37
  - 3.2.3 The Duffing-Equation with Small Forcing 37
  - 3.2.4 The Nonlinear Mathieu-Equation 39

3.2.5 The Mathieu-Equation with Damping 40
3.2.6 Models for Autoparametric Energy Absorption 41
3.3 The Poincaré-Lindstedt Method 45
3.3.1 General Approach for Variational Systems 47
3.3.2 The Poincaré-Lindstedt Approach for Autonomous Systems 48
3.3.3 The Poincaré-Lindstedt Approach for Non-autonomous Systems 49
3.4 Applications of the Poincaré-Lindstedt Method 50
3.4.1 The Periodic Solution of the Van der Pol-Equation 50
3.4.2 A Case of Non-uniqueness 52
3.4.3 The Mathieu-Equation 52

4 Second Order Periodic Averaging 55
4.1 Second Order Precision 55
4.2 Applications 56
4.2.1 Simple Conservative Systems 57
4.2.2 Van der Pol-Excitation at 2nd Order 59
4.2.3 Intermezzo on the Nature of Timescales 60
4.2.4 The Chaotic Systems Sprott A and NE8 62

5 First Order General Averaging 65
5.1 The Basic Theorem for General Averaging 65
5.2 Second Order General Averaging 67
5.3 Applications 67
5.3.1 Van der Pol-Equation with Changing Friction 67
5.3.2 Linear Oscillations with Increasing Friction, Adiabatic Invariant 68
5.3.3 Quasi-Periodic Forcing of the Duffing-Equation 69
5.3.4 Quasi-Periodic Forcing of a Van der Pol Limit Cycle 70
5.3.5 Evolution to Symmetry, Adiabatic Invariants 72

6 Approximations on Timescales Longer than $1/\varepsilon$ 79
6.1 When First Order Periodic Averaging Produces Trivial Results 79
6.2 The Case of Attraction 80
6.3 Applications 81
6.3.1 Excitation Frequency $\omega = 1$ for the Mathieu-Equation 81
6.3.2 A Cubic Hamiltonian System in 1 : 1 Resonance 82
6.3.3 The Amplitude of Periodic Solutions of Autonomous Equations 84
6.3.4 The Damped Duffing Equation with $O(1)$ Forcing 84

7 Averaging over Spatial Variables 89
7.1 Averaging over One Angle 89
7.2 Averaging over More Angles 90
7.3 Applications 92

7.3.1 A Pendulum with Slow Time Frequency Variation 92
7.3.2 A Typical Problem with One Resonance Manifold 93
7.3.3 Behaviour in a Resonance Manifold 94
7.3.4 A 3-Dimensional System with 2 Angles 96
7.3.5 Intersection of Resonance Manifolds 98
7.3.6 A Rotating Flywheel on an Elastic Foundation 102

8 Hamiltonian Resonances 107
8.1 Frequencies and Resonances in the Hamiltonian Case 108
8.2 Higher Order Resonance in 2 Degrees-of-Freedom 109
8.3 The Poincaré Recurrence Theorem 111
8.4 Applications 112
8.4.1 A General Cubic Potential 113
8.4.2 A Cubic Potential in Higher Order Resonance 115
8.4.3 The Spring-Pendulum in Higher Order Resonance 116
8.4.4 Three dof, the 1:2:1 Resonance 118
8.4.5 The Fermi-Pasta-Ulam Chain 123
8.4.6 Interaction of Low and Higher Order, the 2:2:3 Resonance 127
8.4.7 Interaction of Low and Higher Order, the 1:1:4 Resonance 132

9 Quasi-Periodic Solutions and Tori 137
9.1 Tori by Bogoliubov-Mitropolsky-Hale Continuation 139
9.2 The Case of Parallel Flow 140
9.3 Tori Created by Neimark-Sacker Bifurcation 142
9.4 Applications 142
9.4.1 A Forced Van der Pol-Oscillator 142
9.4.2 Quasi-Periodic Solutions in the Forced Van der Pol-Equation 143
9.4.3 Neimark-Sacker Bifurcation in Two Coupled Oscillators 144
9.4.4 Interaction of Vibrations and Parametric Excitation 146
9.4.5 Interaction of Self-Excited and Parametric Excitation 148
9.4.6 Interaction of Self-Excited Oscillations (Hale's Example) 151
9.5 Iteration by Integral Equations 152
9.6 Applications of the Iteration Procedure 155
9.6.1 Hale's Example by Iteration 155
9.6.2 Two Coupled Oscillators with Forcing 157
9.6.3 Iteration of the Cartoon Problem 159

10 Averaging for Partial Differential Equations 163
10.1 Metric Spaces and Norms, a Reminder 164
10.2 Averaging a Linear Operator 165

10.3 Wave Equations, Projection Methods 167
10.4 Applications 170
10.4.1 Application to a Time-Periodic Advection-Diffusion Problem 170
10.4.2 Advection-Diffusion with Reactions and Sources 171
10.4.3 The Wave Equation with Cubic Nonlinearity 172
10.4.4 A 1-Dimensional Dispersive, Cubic Klein-Gordon Equation 173
10.4.5 The Cubic Klein-Gordon Equation on a Square 175
10.4.6 The Keller-Kogelman Problem 177
10.4.7 A Parametrically Excited Linear Wave Equation 178
10.4.8 Parametrical Excitation of Nonlinear Waves 180
10.4.9 Parametrical Excitation of 2-Dimensional Nonlinear Waves 181
